SUMMARY

UC Santa Cruz Computer Science: Game Design graduate (June 2026) seeking game development or software engineering roles in the SF Bay Area. Programming Lead on a Unity/C# roguelike, with shipped solo projects in Lua and JavaScript and UX experience in Figma.

EDUCATION

UC Santa Cruz

June 2026

B.S. in Computer Science: Computer Game Design

PROJECTS

Combat Shuang — 2D Roguelike Game (Team of 7) [GitHub](#)

Jan – Mar 2026

Programming Lead · Unity · C#

- Led the programming department for a kitchen-themed 2D roguelike, designing core gameplay systems including a level-up/upgrade system, XP progression, and a crit-rate/crit-damage combat system.
- Iterated on combat feel from playtest and instructor feedback — reworked aiming and dash controls for accessibility, tuned enemy spawning and damage balance, and added damage pop-ups for clearer feedback.
- Built the full sound system (per-level BGM, combat and UI SFX) and a Game Over screen displaying run stats.

CCCG — Turn-Based Card Battler (Solo Project) [GitHub](#)

Apr – Jun 2025

Solo Developer · Lua

- Built a turn-based, lane-control card game in Lua — three contested lanes, a scaling mana economy, and a staging-and-reveal turn cycle where cards resolve in play order.
- Implemented an AI opponent and a data-driven card ability system with on-reveal effects (board manipulation, card draw, deck interaction, and passive auras).
- Designed a readable UI with hover tooltips and smooth animations for card movement, flips, and mana.

MoneyWi\$e — Personal Finance App (Team UX Project) [Figma](#)

Apr – Jun 2026

Product & UX Design · Figma

- Designed a personal-finance app on a cross-functional team, owning UX research and interface design from concept through usability testing.
- Built interactive Figma prototypes, owning the budgeting tool flow, and iterated based on heuristic evaluation and moderated user testing.

Light Wall — Arena Survival Game (Solo Project) [GitHub](#)

Feb – Mar 2025

Solo Developer · JavaScript

- Developed a real-time light-cycle arena game inspired by Tron, where vehicles leave persistent trails and players are eliminated on collision.
- Implemented AI-controlled opponents, continuous trail-collision detection, and an elimination-order ranking system within a cyber-themed arena.

WORK EXPERIENCE

Course Reader / Grader — UC Santa Cruz

Oct 2025 – Jun 2026

Statistics / Mathematics · The Regents of the University of California

- Graded coursework across three quarters, applying rubrics consistently and giving students clear, actionable feedback.
- Coordinated with the supervising professor on grading standards and handled regrade requests professionally and fairly.

SKILLS

Programming: Python, C++, C, C#, JavaScript, Lua, HTML/CSS

Tools: Unity, Figma, Google Workspace, Phaser, GitHub

Design: UX research, prototyping, usability testing, heuristic evaluation

Languages: English (Conversational), Mandarin (Native), Cantonese (Native)
